

Abstract**Monitoring and Rejection System and Apparatus**

5 A monitoring system checks for correct application of adhesive tracks 6
to e.g. the flap 2 of a cardboard blank 1 on a conveyor system. It includes
sensors 14,15 for detecting the position of the blank 1, and a central controller
18 for triggering a camera 16 to take one or more images of the blank 1 at
10 suitable times after the blank 1 is detected, e.g. using the output of an encoder
17. The images may be taken at the expected start, middle and end of the
tracks 6, and are analysed by the controller 8 to check for correct application of
the tracks 6. The controller 8 and sensors 14,15 can also be used to initially set
the dimensions of the blank 1, and the controller 8 can also track a failed blank
1 and reject it later in the conveyor system.
